Informational Issues

I-01. Liquid deposits bypass the supported trading-asset registry

Description: `TradingLens` maintains the protocol's supported trading-asset registry, exposed through `TradingSafeFactory.isSupportedToken()`. However, `TradingSafeLiquidDepositModule.depositToTopUp()` does not verify that `request.assetToDeposit` is included in this registry.

Recommendation: Consider validating the input asset against the canonical trading registry before executing the deposit:

Customer's response: Acknowledged

Fix Review: Acknowledged

About Certora

Certora is a Web3 security company that provides industry-leading formal verification tools and smart contract audits. Certora's flagship security product, Certora Prover, is a unique SaaS product that automatically locates even the most rare & hard-to-find bugs on your smart contracts or mathematically proves their absence. The Certora Prover plugs into your standard deployment pipeline. It is helpful for smart contract developers and security researchers during auditing and bug bounties.

Certora also provides services such as auditing, formal verification projects, and incident response.
