Informational Issues

I-01. Possible issues with permissionless `wrapStocks` function

Description: The latest commit adds a permissionless `wrapStocks` function which allows any party to wrap a raw xStock token into its wrapped form for the entire raw balance held by the top up. The wrapper returns the shares directly to the top up address.

Since it is permissionless, the caller of `wrapStocks` can determine the time at which the wrapping occurs. Likely this does not result in a negative outcome for users, however, the possibility should be noted.

A direct griefing vector arises in conjunction with the `redirectToTradingSafe` and `batchRedirectToTradingSafe` functions. Both of these will experience reverts if a 3rd party initiates a call to `wrapStocks` before the call succeeds. In the case of batch redirects, if a single raw stock is not present in the requested amount, the entire batch reverts.

Recommendation: Restrict the `wrapStocks` function to the same role as the redirects: `TOPUP_FACTORY_REDIRECT_ROLE`

Customer's response: Acknowledged.

About Certora

Certora is a Web3 security company that provides industry-leading formal verification tools and smart contract audits. Certora's flagship security product, Certora Prover, is a unique SaaS product that automatically locates even the most rare & hard-to-find bugs on your smart contracts or mathematically proves their absence. The Certora Prover plugs into your standard deployment pipeline. It is helpful for smart contract developers and security researchers during auditing and bug bounties.

Certora also provides services such as auditing, formal verification projects, and incident response.
